Congratulations and Next Steps

0:55 / 1:51 1x

Congratulations on completing this course. We hope you enjoyed it.

Data Science and Analytics professions are expected to have skills with multiples tools and programming languages. In this program, you learned to work SQL and Python.

If you would like to increase your Python skills, it can make a great addition to your resume. As a next step, you can take:

- IBM Data Analyst Professional Certificate

If you would like to learn how to develop AI-powered applications, you can take:

- IBM Applied AI Professional Certificate

If you would like to add Machine Learning and Deep Learning skills to your resume, you can take:

- IBM AI Engineering Professional Certificate

We encourage you to leave your feedback and rate this course so that we can continue to improve the course content.

Good luck!

Career Guidance and Interview Preparation for Data Science Jobs

Now that you've developed your new skills in Data Science, you'll start thinking about looking for work in your field to use them. Job seeking has its own set of skills, however. Before you head out into the job market, increase your chance of success by taking the Data Science Career Guidance and Interview Preparation course.

In this course, you'll learn about becoming an exceptional job candidate, including:

- How to focus your job search to match your goals
- How to write an effective resume
- How to compile a portfolio that shows off your work
- How to find and assess job listings
- Tips for performing at your best in interviews

Information-filled lessons and activities are accompanied by direct advice from experts in the field. **This course is offered at no charge** for a limited time, so it's a great time to take advantage and give yourself an edge in the competitive world of finding your best next role.
